

Earthmoving

The earthmoving machinery sector is comprised of a broad variety of equipment – from hydraulic excavators and crawler tractors and loaders, to wheel loaders and dumper trucks. Civil engineering contractors utilize that extensive range of earthmoving machinery on projects of any scale, from small residential projects, all the way up to massive reclamations sites, and mining. The most common applications are in the mining industry, as well as in construction and agriculture. McLaren Industries offers several lines of mini excavator and track loaders rubber tracks, as well as flat proof solid cushion tires for wheel loaders, telehandlers, skid steer loaders, and backhoe loaders. All McLaren products are engineered with the mission to extend the service life, maneuverability and operational capabilities of your earthmoving equipment. Our team of engineers is also available to develop customized solutions for your earthmoving fleet. Please, contact McLaren Industries for more information on our earthmoving solutions.
