Agriculture

McLaren Industries has been serving the agricultural industry with the FielfMaster series of quality rubber tracks for harvesters. McLaren has developed a series of customized solutions throughout the construction of the rubber tracks, which result in greatly improved performance and durability.

The new FieldMaster™ Multi-Season Series rubber tracks by McLaren Industries are built wear resistant forgings. They use McLaren's proprietary SpoolRite Belting™ jointless belt system, which increases overall tensile strength and prevents stretching. A number of technological developments have been implemented to improve stability and high track performance at maximum capacity.

McLaren’s agricultural rubber tracks are a popular option in some Asian markets, including India and China, and have been chosen by a number of OEMs.
