McLAREN
Manufacturer of Tracks and Tires

The Benefits of Non-Marking Forklift Tires

One of the main downsides of many types of forklift tires is that they leave black marks on the surfaces they drive over. In applications where preserving clean surfaces is essential, there is another option: non-marking forklift tires. Such tires are composed of rubber compound using silica rather than carbon black as the reinforcing agent. To determine if these tires are worth the investment, check out these enticing benefits of non-marking forklift tires.

Say Goodbye To Black Marks

The main reason to use a non-marking forklift tire is that you don't want to leave black marks on the surface you drive over. For example, if you're in food factories, retail stores, an industry that deals with high-end chemicals, petroleum factories, semiconductors, automobile assembly plants, and essentially any application where keeping the area clean is a priority, non-marking tires are essential.

When your forklift tires leave black markings in such situations, you will likely incur significant cleaning expenses. In addition, you will have to spend additional time completing the cleaning process after you have finished your job. Fortunately, non-marking forklift tires allow you to avoid such a hassle by preventing markings from forming in the first place.

No More Black Dust

Aside from not leaving black marks on the ground, another one of the top benefits of non-marking forklift tires is that they don't produce a black dust. As traditional forklift tires begin to experience wear, they emit a black dust into the air. In addition to reducing the air quality of the space, such dust can lead to food or sample contamination and create an unclean environment. As such, even if you're not necessarily worried about flooring getting marked up, purchasing non-marking forklift tires can be beneficial for maintaining a clean and

safe environment.

At McLaren, we know how important it is to find forklift tires that are precisely suited to the needs of your application. As such, we offer non-marking forklift tires in both cushion and solid pneumatic options. To purchase exceptional-quality tires from a leading manufacturer in the industry, contact us today at (800) 836-0040 or click here to request a quote.
